## SRS (Sigmoid Colon)

### SRS (Sigmoid Colon)

SRS (Sigmoid colon) *transposition is used for patients who need more depth (exceeding 8 inches).*

Sex Reassignment Surgery “**Sigmoid Colon**” (the sensational glans clitoris, labiaplasty, 7-8 inches depth and vaginoplasty).

Preecha Aesthetic Institute (PAI), the Pioneer for *Sex Reassignment Surgery* in Thailand.

Transsexual person is someone who was born into the wrong body. They have the body of one gender and the mind of the other. Transsexuals may be a female trapped in a male's body or a male trapped in a female's body.

Preecha Aesthetic Institute has been provide information, help and supportive for Transsexuals, and Cross-Dressers of all ages, we are especially Reconstructive Center located in Bangkok ,Thailand for those who are in the final stages of “Sex Reassignment Surgery”. We have been performed SRS by PSI, SSG and SCG > 4,800 + cases.

### What is Sex Reassignment Surgery ?

Initialized as **SRS**; also known as **genital reconstruction surgery**, **sex affirmation surgery**, **sex realignment surgery**, **gender change**, **gender reassignment**, **gender**

**reassignment surgery, gender surgery or sex-change operation**) is a term for the surgical procedures by which a person's physical appearance and function of their existing sexual characteristics are altered to resemble that of the other sex.

It is part of a treatment for gender identity disorder/gender dysphoria in transsexual and transgender people.

Other terms for **gender change operation** include gender reassignment surgery, sex reconstruction surgery, genital reconstruction surgery, gender confirmation surgery, and more clinical terms, such as feminizing genitoplasty or penectomy, orchidectomy and Vaginoplasty are used medically for trans women

**Sex Reassignment surgery by Sigmoid Colon (lubricate with organism)**

SRS with **Sigmoid Colon**

- the sensational glans clitoris
- labiaplasty
- vaginal deeper canal
- vaginoplasty in one stage.

**Selecting the method in Sex Reassignment Surgery**

**Between Penile Skin Inversion or Sigmoid Colon**

if you are:

1. **Long Penis** (>6 inches (15 cm), when erect) = **Penile Skin Inversion (PSI)**
2. **Medium Penis** (2-6 inches (5-15 cm), when erect) = **Penile Skin Inversion (PSI) with Scrotal Skin Graft (SSG)**
3. **Short Penis** (<2 inches (5 cm), when erect) = **Penile Skin Inversion (PSI, SSG) with Sigmoid Colon Graft (SCG)**

**Best Candidate for Sex Reassignment Surgery:**

Sex Reassignment Surgery male to female.

PAI (Preecha Aesthetic Institute), we are following WPATH/HBIGDA or SOCs.

The **Standards of care for gender identity disorders** – WPATH (World Professional Association for Transgender Health) the earliest sets of clinical guidelines for the express purpose of ensuring “lasting personal comfort with the gendered self in order to maximize overall psychological well-being and self-fulfillment.” These standards are still the most well-known; however, other sets of SOCs, protocols and guidelines do exist, especially outside the USA.

- Specific minimum requirements as prerequisites to HRT
- Much of the criticism surrounding the WPATH/HBIGDA
- Psychological evaluation letter
- Highly controversial and often maligned document among patients seeking medical intervention (Hormones)
- Real-Life experience
- Physically healthy and emotionally stable with realistic expectations
- Must be over 18 year old with good health condition

**The package's inclusive for male to female surgery Thailand :**

- Accommodation for 5 days in hospital private room after surgery
- Operating Room Charges: OR Room Use, Recovery Room, Scrub & Circulate Nurse

Type of Anesthesia: General Anesthesia

#### **sex change pre-op**

- 1) Inform us about any allergies, any serious medical condition(s), and all medications you are - taking (both prescription and non-prescription).
- 2) Qualify letter from Psychiatrist doctor or Hormone Therapist
- 3) No Aspirin 2 days before surgery.
- 4) Stop vitamin E Oil 1 day before surgery.
- 5) Stop smoking 2 days and a month after surgery.
- 6) Stop Hormone, if taken 2 weeks before surgery date
- 7) Tell doctor if you have any serious medical condition(s).
- 🍽️ Stop meal and water starting from midnight before surgery.
- 9) Plan to be in Thailand at least 14 days after or at least 15 days (Before and after) surgery.

#### **Sex change procedure**

1. Creation of vaginal space between urethra, prostate gland, bladder and rectum
2. Bilateral orchietomy
3. Degloved penis shaft
4. Separation of urethra from penis
5. Isolation glans penis with 2 dorsal nerves and vessels
6. Penile skin inversion to line vaginal cavity with or without scrotal skin graft or sigmoid colon graft
7. Clitoroplasty (Sensate)
8. Urethralpasty
9. Labiaplasty, major and minor

A portion of the glans (head of the penis), with its nerves and vessels, is converted into a clitoris. In so do, the clitoris will be functional in sensation as well as in appearance.

The excess erectile tissue around the urethra should be removed in order to avoid symptoms that stem from engorged erectile tissue during sexual arousal, that may result in the narrowing of the vaginal opening.

**Post-op recovery: sex change recovery time**

After reassignment surgery, pain that is easily controlled by medication usually will subside in a few days. Dressings have been applied. We will be replaced a few days. Sutures will be removed within a week of surgery.

Although the surgeon has made every effort to keep scars as inconspicuous as possible. They are the inevitable result of surgery. Minimal swelling and discoloration will disappear rapidly.

Healing process may occur for weeks or even months following surgery. Dilation will be given an instruction during follow up visits. The decision on when to return to work and normal activities depends on how fast you heal and how you feel. To permit proper healing, you should avoid over activity and refrain from overhead lifting.

**Treatment after surgery for sex reassignment surgery**

After release from hospital you will recover with the aid of liaison at the hotel.

During recovery in the hotel, you must follow instructions including:

1. Dilating is the most important thing you can do to ensure the success of your surgery. If you do not dilate responsibly, this can result in the shortening of depth and width of the newly made vagina because of the scar contracture.

2. Failure to dilate properly can result in serious injury. You will be instructed to gently dilate into the right direction after the vaginal packing is removed.

3. Dilation can be painful for the first weeks, but is essential for developing maximum

4 Depth and ensuring post operative functioning of the neovagina. More instructions will be given after surgery

**During the recovery period and after each dilation session:**

- The wound should be washed gently with Hibiscrub (pink color) in the shower followed by douching while seated in the toilet:

- Douche solution (proportion) = 5-10 ml (cc) of Beta dine solution mixed with 1L of water or until the container is full.

- Insert the douche to full depth, squeeze, and hold tightly the container.

- While holding tightly the container, extract the douche;

- Keep the wound dry and apply Beta dine solution with cotton balls; and apply Kemicetine ointment with a cotton applicator. If there is some bleeding, press or apply pressure with a dry cotton ball to the site for 15 minutes. During the first weeks after surgery, feminine napkins (tampons) should be changed several times per day due to normal vaginal bleeding during recovery.

- After one month of SRS operation you will be required to start applying Premarin cream to your neo-vagina. Apply two times a day to soften your neo-vagina. This would generally take around six months.

- You can return to female hormones as before surgery or after two weeks. You should consult your endocrinologist to re-adjust the dosage. A sudden change in hormone levels, for some individuals, may result in the fluctuation of emotion.

- For SRS patients – a full post-operative care kit necessary for dilation, including a -piece dilator set specially manufactured for GRS as design by Preecha Aesthetic Institute.

Post-operative checks by our nursing staff on a daily basis throughout your stay with us in hospital.

Post-operative check-ups by PAI's surgeon at least twice weekly and more frequently if necessary – while you are here.

Because we believe no one can work best in all kinds. Therefore, at PAI, Dr.Preecha Tiewtranon, MD's highly selective qualify doctor who match for each type of procedure, FFS, SRS, body contouring as well as anaesthesiologist and team of operating theatre nurses.

#### Results

We are confident you will find the overall service we offer for these surgeries to be more comprehensive than is available from any other surgery, anywhere.

## FAQs (Sex Reassignment Surgery)

### Q: How did you pick the PAI?

A: I was lucky that my mother has a doctor friend, who happens to be a great surgeon. She recommended me to a doctor at PAI. The best thing was their greatest cares.

### Q: What came before the operation?

A: You must consult with psychologist and see if you was truly ready to get it done.

### Q: How did you feel after surgery?

A: I woke up feeling very blurry. There were tubes everywhere. The saline drip was inserted into my left hand and the pulse rate meter on the right. There was also a tube attached into the bulging part of my new female sex organ to take the blood out of my body. I was also new to the whole female peeing thing so, they had another tube inserted into my urethra to ease me into the process. On the third day after surgery, my body got used to the new organ and I was ready to pee on my own.

### Q: How do you feel now?

A: I have more confidence, and feel more like myself. People keep telling me that my body shape really changed and looks more feminine in every way. In terms of sex, I have the same feeling as any women.

### Q: I was wondering if you have any combination packages that would involve SRS surgery and a facial feminization surgery?

A: Yes. We can set up combination packages for SRS, Facial Feminization and Breast Augmentation together.

### Q: Do you make labia major and minor ?

A: The labia majors and minors are created.

### Q: Do we have orgasm in this surgery technique?

A: We cannot guarantee, because even natural female do not all have orgasm. But 70-80% of our patients reported orgasm.

### Q: What does vagina looks like after surgery? Will it be natural as women's vagina? Do any one can recognize with this vagina that we were a boy before?(I have seen the pictures of your surgery in the web site but I would like to ask about it again)

A: Many partners and gynecologists cannot tell.

### Q: Do I have to aware of external medical expenses ?

A: Our price includes all post-operative medical and hospital costs arising from the surgery. However, where additional medical symptoms arise in a patient that are not directly related to the surgery undertaken, but are because of a known or unknown prior medical condition that manifests itself while under the care of Preecha Aesthetic Institute the costs involved with treatment of these is expressly excluded from the prices quoted. Patients are therefore strongly recommended to arrange medical insurance to cover the eventuality of non-related medical costs arising while staying under our care.

### Q: I read some of information. Can Colonvaginoplasty lead to a large number of unpleasant complications including colon fistula, and faecal incontinence.

A: It is possibly. Within our experiences 30 years, we have done 700++ cases for *Colon (SRS)*. Non of them've experienced with unpleasant. We have to make sure that they are safe to fly.

### Q: What is requirement for SRS (Sigmoid Colon)?

For Sigmoid Colon, your body weight should no more than 90 KG. (Lbs 190), No previous abdominal surgery and Good health.

### Q: I read that in order to get SRS (sigmoid colon surgery) no previous abdominal surgery must be done. I had the normal SRS procedure done 4 yrs ago. Does that I mean I cant have the sigmoid colon done after all?

No, it does not. Base on your information, you had normal SRS four years ago. If you are not happy with the depth of vagina canal or looking to gain more depth. The new method is called Secondary Sigmoid Colon, which can be done after normal SRS.

Preecha Aesthetic Institute doctors Dr.Sirachai Jindarak MD, Dr.Prayuth Chokrungrvaranont MD, Dr.Sattha Siritantikorn, MD, Dr.Apichai Angspatt, MD, Dr. Preecha Tiewtranon MD, Dr.Sutin Khobunsongserm, , Dr.Burin Wangjiraniran MD. FRCS

.Sattha Siritantikorn, MD, Dr.Apichai Angspatt, MD, Dr. Preecha Tiewtranon MD, Dr.Sutin Khobunsongserm, , Dr.Burin Wangjiraniran MD. FRCS

## Risk

All surgery carries risks – But can minimize by closely following your surgeon's advice on follow up care during the healing process.
